

SMARTER AND SAFER: ERGONOMICS ENGINEERING SOLUTIONS IN MANUFACTURING

On-The-Floor Ergonomics

- Develop a sustainable ergonomic program
- Train-the-Trainer philosophy to teach & understand ergonomics
- Collaborative brainstorming & problem-solving with employees
- Develop & implement countermeasures for immediate help
- Discuss long term solutions through continuous improvement

Industry Experience

Manufacturing – Medical Device, Textile, Apparel, Chemical, Fiber Optics, Hardware, & Defense

Skilled Labor/Trades – Gas, Oil, Propane, Plumbing, Electrical & Carpentry Logistics, Warehouse, & Fleet Operations

Service – Housekeeping, Maintenance, Kitchen/Food, & Grounds

Office – University/College, Call Centers, & Support Staff

ESI Wellness Clinicians who specialize in Industrial Ergonomics work side by side with Company representatives and employees on-the-floor or in-the-field. It's important to go to where the problems occur; to see with your own eye's, to understand, and to brainstorm with those who perform the job task.

Problem-solving as a team is highly effective, fosters teamwork, and increases moral & engagement. This leads to a positive and collaborative Safety Culture which is based in small, incremental changes with a continuous improvement philosophy.

Make today a little better than yesterday...and believe that tomorrow will be better than today.
