ProActive Symptom Management is an onsite multi-tiered program that dramatically reduces the cost associated with work- and non-work related injuries including: Workman's Compensation claims, OSHA Recordable Lost Time Injuries, STD, LTD, and even a reduction in Health Insurance Claims Ratios affecting your premiums. At the same time, the program generates enthusiastic employees who feel empowered to take responsibility for their health and safety, creating a tangible culture change.

Early Symptom Intervention Wellness Program ProActive Symptom Management

What are our Corporate Clients saying:

"The Early Symptom Intervention Program at KARL STORZ ENDOVISION, Inc. is credited as a critical success factor supporting a 92% reduction in OSHA Recordable musculoskeletal injuries over a 3 year period. The engaged and caring staff at ESI has provided one to one coaching and education, as well as interactive "on the floor" education and awareness to high risk ergonomic hazards. Positive reinforcement helps empower employees and management act quickly and responsibly to adverse symptoms, and to act with confidence and knowledge to prevent injuries from occurring."

Bruce H Watkins, General Manager
Karl Storz Endovision

"During our last OSHA survey, the OSHA surveyor commented specifically about the positive aspects of ESI during our exit survey. He found the PREVENTATIVE nature of the program to be a direct contributor to decline in both the number and severity of ergonomic issues in our building from the year prior to our company working with ESI and following our first full year partnered with them. He further commented that an additional benefit of the program was the positive morale that employees reported with having a program they could go to ahead of time before any issues, vs. reactionary after an injury or problem occurred."

Michael Leblanc, Facilities Manager,
Incom
